INVESTORS & STRATEGIC PARTNERS

Help build the human side of AI.

The future of autonomous AI needs a human off switch. We're looking for investors who want to help us build it.

EARLY DEVELOPMENT

Open to investor conversations

OUR THESIS

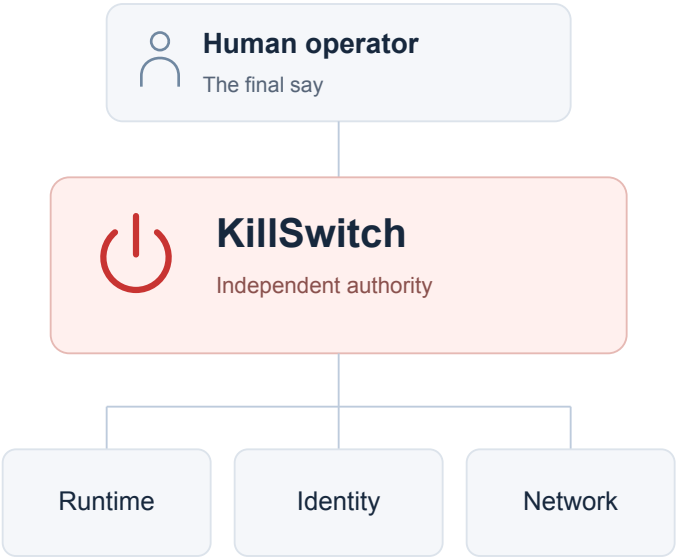

More autonomy. A greater need for control.

As teams give AI agents more tools, permissions, and responsibility, they will need a practical way to intervene when the unexpected happens. Our product direction places shutdown authority outside the agent's own permissions.

EXPLORE TODAY

Product concept, interactive browser simulation, and shutdown planning tools.

THE CONTROL MODEL

Illustrative control model. Real enforcement depends on integration with each connected system.

PRODUCT & PARTNERSHIP OVERVIEW

A big red button.
A considered system behind it.

01 / HUMAN OVERRIDE

Control

A human-authorized path to stop connected workloads, enforced outside the agent's own permissions.

02 / WORKLOAD ISOLATION

Contain

Isolate affected runtimes and account for connected sub-agents, delegated tasks, and scheduled work.

03 / ACCESS CONTROL

Revoke

Block tool and network access. Revoke API keys, service accounts, and other credentials at their issuer.

04 / HUMAN-LED RECOVERY

Recover

Preserve evidence, verify the stop, and require human approval before execution or access is restored.

Development priorities

- Runtime, identity, and network integrations.
- Operator controls and independent verification.
- Controlled pilots and repeatable shutdown drills.
- Evidence preservation and human-authorized recovery.

Who we want to meet

Investors. AI security and infrastructure conviction.

Strategic partners. Insight across cloud, identity, and agent ecosystems.

Advisors & builders. Security, distributed systems, incident response, and go-to-market experience.

DEVELOPMENT STAGE & SCOPE

KillSwitch is in development; the demo is a simulation. Enforcement depends on integrated systems under human authority. Independent copies, unconnected platforms, and completed actions need separate response procedures.

Explore the vision. Start a conversation.
